

PHANTOM Security Assessment Report

Target System: <https://test-target-site.com>

Overall Risk Score: 85/100

Executive Summary

PHANTOM discovered a high-severity multi-step attack chain during the automated assessment, tracking vulnerability exposures across public-facing parameters.

Vulnerability Findings

[HIGH] PH-01: Exposed Backup Directory Configuration

Discovered via: OWASP ZAP

Sensitive environment configurations and archived database backups were found publicly accessible at `/backup/db_dump.sql`.

[MEDIUM] PH-02: Server Banner Information Disclosure

Discovered via: Nuclei

The production server leaks internal component version information via standard response header blocks, aiding attacker profiling.
